Projects

Deep Learning Based Blood Group Prediction Using Fingerprint

[GitHub Link](#)

Python, TensorFlow, CNN, Flask, OpenCV, PostgreSQL

- Developed a deep learning model to predict blood group from fingerprint images using Convolutional Neural Networks (CNN).
- Performed image preprocessing, feature extraction, and dataset balancing to improve model accuracy.
- Integrated Grad-CAM to highlight key regions in fingerprints for improved interpretability.
- Built a web-based system using Flask to upload fingerprints and display prediction results.

College Alumni Portal
